

Patient Information:

- Patient ID: XYZ123456
- Name: John Doe
- Date of Birth: 01/01/1975
- Gender: Male

Date of Report: 06/25/2024

Examination Details:

- Modality: Chest X-ray
- Date and Time of Examination: 06/25/2024, 10:00 AM
- Referring Physician: Dr. Jane Smith
- Clinical Indication/Reason for Examination: Suspected pneumonia

Imaging Technique:

- Description of the technique used: Posteroanterior and lateral views obtained
- Specific settings or protocols: No contrast medium used
- Radiation dose: Standard dose for X-ray imaging

Findings:

- Both lungs show patchy opacities consistent with pneumonia
- No evidence of pleural effusion
- Heart and mediastinal contours appear normal

Impression:

- Bilateral patchy opacities indicative of pneumonia
- No other significant findings were noted
- Recommend clinical correlation and appropriate management

Comparison Studies:

- No previous chest X-rays available for comparison

Additional Comments:

- None

Specialist Comments:

- None
